

Practical - 2

Practical Title: Semantic HTML5 Pages with Accessibility-Ready Structure

Problem Definition: Develop static HTML5 skeletons for at least 10 StudentHub pages such as Home, About, Register, Login, Dashboard, Events, Profile, Contact, Admin, FAQ, and Feedback. Use semantic tags and accessibility-friendly structure.

L. Theory

1. Are semantic tags such as header, nav, main, section, article, aside, and footer used properly?

Answer: Yes , I use tags such as nav ,header, main, section, footer .

2. Are form labels, headings, image alt text, and navigation links accessible?

Answer: Yes , all image, lables and navigation links are accessible by browser .
(using <a> and href ="link");

3. Is the page structure consistent across all pages?

Answer: Yes , all pages have consistent structure . (title,header,body,footer)

M. Implementation/ Output/Result :

<!DOCTYPE html> Declares the document as HTML5.

<html> Root element of the HTML page.

<head> Contains page information like title and CSS links.

<meta> Defines character encoding and viewport settings.

<title> Sets the title shown in the browser tab.

`<link>` Links an external CSS file.

`<header>` Defines the page header section.

`<center>` Centers the content (deprecated tag).

`<img>` Displays an image/logo.

`<h1>` Main heading of the page.

`<h2>` Section heading.

`<h3>` Sub-heading.

`<p>` Defines a paragraph.

`<b>` Makes text bold.

`<nav>` Contains navigation links.

`<a>` Creates hyperlinks.

`<marquee>` Displays scrolling text (deprecated tag).

`<body>` Contains all visible page content.

`<main>` Represents the main content of the page.

`<section>` Groups related content into sections.

`<article>` Represents independent content or an article.

`<ul>` Creates an unordered (bulleted) list.

`<li>` Defines a list item.

`<hr>` Inserts a horizontal line.

`<footer>` Defines the footer section.

P. Challenges Faced:

- I have a design in my mind that how I make my header but I was stuck when scrolling text problem comes , I saw charusat portal where at footer part one text link is scrolling

automatically , I don't know what concept I can use , then I go to MDN Website and find that the tag named "<marquee>" is reason for scrolling text.

```
<marquee style="background-color: ■rgb(251, 248, 148); color: ■#f37200;">
Admission Open 2026 • AI Workshop Registration Started • National Hackathon Registration Open • Semester Examination Timetable Re
</marquee>
```

- Then , I was stuck , when I making webpage of Dashboard , for Dashboard I want default user profile picture photo in round shape for an example if we do not keep profile picture in social media profile , then it keeps default white-grey default picture .

So , for that picture I search in google and it gives me pic link also for some emoji there is some class keyword in html (i.e. : <i class="fa fa-shopping-cart"></i> and graduation cap etc..)

```
<i class="fa-solid fa-magnifying-glass"></i>
</div>

<div class="user">
  <i class="fa-solid fa-bell"></i>
  
  <span>Yaksh Butani</span>
</div>
</div>

<div class="welcome">
  <h1>Welcome Back 🧑</h1>
  <p>B.Tech Computer Engineering</p>
</div>

<div class="cards">
  <div class="card">
    <i class="fa-solid fa-user-check"></i>
    <h2>95%</h2>
    <p>Attendance</p>
  </div>

  <div class="card">
    <i class="fa-solid fa-graduation-cap"></i>
    <h2>7.93</h2>
    <p>CGPA</p>
  </div>

  <div class="card">
    <i class="fa-solid fa-book"></i>
```

Q. Learning Outcomes:

I will create clean, linked, and accessibility-ready HTML page structures.

CONCLUSION :

The StudentHub Practical successfully demonstrated the development of structured and accessibility-ready HTML5 pages using semantic HTML elements. Multiple pages such as Home, About, Register, Login, Dashboard, Events, Profile, Contact, Admin, FAQ, and Feedback were designed with a consistent page structure and proper navigation. Through this practical, I learned how to use semantic tags such as <header>, <nav>, <main>, <section>, <article>, and <footer> to create a well-organized webpage. I also gained practical knowledge of hyperlinks, images, headings, lists, forms, and accessibility-friendly elements. The challenges faced during implementation, such as scrolling text and adding a default profile image with icons, helped me explore HTML concepts and external resources more effectively. Overall, this practical improved my understanding of HTML5 structure and helped me develop clean, linked, and accessibility-ready web pages for the StudentHub portal.
